30%	40%	60%	80%	90%	100%	100%	90%	80%	60%	40%	30%

Adjust your automatic timer, as best you can, according to the numbers you get from the calculator. You may need to make compromises based on the limitations of the controller. Pay attention to your plants for stress, and increase or decrease watering times accordingly. Skip two watering days when it rains or when the soil is already wet.
